

Elimination of plastic bottles

A concrete step towards sustainability

- With a view to paying greater attention to the environment and reducing the environmental impact of our daily activities, we have completely **eliminated the use of plastic bottles in our company**. In their place, a reverse osmosis water dispenser has been installed, which guarantees microfiltered water, good and safe to drink, helping to drastically reduce the consumption of single-use plastic.
- In addition, to reinforce our commitment to more sustainable practices, we have introduced the use of **compostable coffee cups and stirrers, replacing traditional plastic accessories with eco-friendly alternatives** that respect the environment and reduce the impact of waste. This choice is part of our concrete commitment to environmental sustainability, promoting responsible behavior and ecological choices that make a difference every day.

**Less plastic, more responsibility.
A simple gesture, a real impact.**
